## MESSAGE BY MANWAR HOSSAIN

Chairman

It has been a pleasure to serve Bangladesh for almost 200 years. The group prides on introducing 36 new products and services to the Bangladeshi economy in its long and steady journey. We strongly believe our understanding of Bangladeshi people, our culture and most importantly, our roots help us bring the right product to the Bangladeshi market at the right time.

Starting from Mala Saree to polyester fabrics to Manwar Cutleries to private sector banking, all remain landmark steps in the development of Bangladesh. DuraRoof is believed to be yet another revolutionary product. It is anti-corrosive, anti-rusting, fire resistant and an excellent heat insulator. DuraRoof is also very cost effective, not only outlives the conventional steel roofing by up to five times, but also induces higher efficiency and productivity by improving temperature and humidity control inside the plants.

Italian technology-based state-of-the-art, DuraRoof humbly boasts of being the largest cement sheet plant in the world. Committed to continuous development, DuraRoof is also honored to have Bangladesh University of Engineering and Technology (BUET) as its long-term Research Partner. DuraRoof also has Bhakdikhanasedh Chrysotile Information Center as its international Research and Development partner.

Beyond Bangladesh, DuraRoof is also exported to India and Pakistan. By 2026, DuraRoof hopes to be able to export to at least 12 different countries. We strongly believe DuraRoof will not only make a mark in Bangladesh, but will also make a mark for Bangladesh in the global market.

## PREFACE

DuraRoof is a contemporary high-tech roofing solution made of cement and strengthened by fiber, applicable for all kind of industries. It is a highly durable product that maintains comfortable working conditions by reducing temperature, increasing productivity and reducing utility expenses. A relentless and dynamic team is responsible for changing the roofing scenario of the country.

## DURAROOF THE ULTIMATE INDUSTRIAL ROOFING SOLUTION

**REDUCES TEMPERATURE  
UP TO 12°C IN SUMMER**

**EXCELLENT NOISE AND  
THERMAL INSULATOR**

**HIGHLY  
COST EFFECTIVE**

**LOW  
MAINTENANCE COST**

**RESISTANT TO  
CHEMICAL REACTIONS**

**QUICK AND EASY  
TO INSTALL AND FIX**

**RUST AND  
CORROSION FREE**

**AVAILABLE IN  
DIFFERENT SIZES**

**FIRE RESISTANT  
UP TO 1100° C**

**CUSTOMIZED  
ACCESSORIES**

**REDUCES  
CONDENSATION**

**TECHNICAL AND  
AFTER SALES SERVICE  
SUPPORT**

## MESSAGE BY

### PROF. DR. M. SHAMIM Z. BOSUNIA

Emeritus Professor, Dept. of Civil Engineering,  
University of Asia Pacific (UAP), Dhaka  
Ex. Professor, Department of Civil Engineering, BUET

Products evolve as solutions to fulfill necessities. Construction industry is apparently changing faster than time. New products in the construction industry, particularly in the last three decades overwhelmed me. When I started my career as a young professional in the mid 60's, reinforced concrete beam-slab system was the main choice for roofing in all buildings including industrial buildings. The roofing of industrial complexes saw the chronological changes from reinforced concrete to CI sheets and then to profile sheets. None of these materials were really a total solution; if one necessity was addressed, another was compromised.

I am glad to see Anwar Group introducing DuraRoof in Bangladesh; indeed a long awaited solution to all the perils of conventional steel based roofing materials. Test results from BUET of DuraRoof were impressive to me. The anti-corrosive nature of the sheets prove its applicability for any industrial usage, particularly for the ones with aggressive nature such as chemical products, fertilizer, textile, dyeing and printing, leather, painting, steel, brick fields, etc. Its thermal, non-conductivity behavior allows it to control room temperature.

Anwar DuraRoof's ability to reduce temperature in summer and increase warmth during winter significantly makes it appropriate for labour intensive industries such as garments, textile, spinning, etc. DuraRoof holds the capacity to withstand very high temperatures as the test results show. In addition, it's anti-rusting elements make it an appropriate roofing solution for all industrial usage. The confidence of the promoters in the products also resounded in the offering of 50 years rust-free guarantee.

As an academic and a professional, it lights my eyes up to be working with such a phenomenal eco-friendly product. I also appreciate Anwar Group's association with BUET, my Alma mater, to work on further developments of the product. Indeed, I hope more entrepreneurs come forth in university based research efforts.  
I wish DuraRoof all the best.

DuraRoof is honored to have Bangladesh University of Engineering and Technology (BUET) as its long-term Research Partner.

## OUR PROMINENT CLIENTS

# MAKING SENSE OF DURABLE AND SUSTAINABLE ROOFING SOLUTION

Bangladesh is at high risk for extreme heat hazards due to its tropical climate, higher temperature, and humidity; and the risk is rising over time. This also makes the industrial environment vulnerable and exposed to heat stress.

Using fossil fuel-generated electric air conditioning creates a vicious circle of greenhouse gases. More air conditioning leads to higher emissions, resulting in a warmer climate, which is again treated by installing more air conditioning.

Heat conditions inside factories can be improved with suitable building structures and passive cooling systems. Renovating and retrofitting industrial shades with cement sheets can be a long-term and sustainable cooling system for factories. From installation to its weatherproof properties and low-level maintenance, cement sheet outperforms profile roofing in numerous ways including:

-  Reduce absence rates and productivity loss
-  Sustainable composition
-  Mitigate temperature up to 12 degrees Celsius
-  Increase production in livestock (Poultry and Dairy) and reduce farm operating expense
-  Reduce physical & psychological impacts of heat stress ensuring employee wellbeing

## STANDARDS AND PROCEDURES FOLLOWED IN PRODUCTION OF DURAROOF

With a promise to offer an unmatched quality in industrial roofing, Anwar Group of Industries has proudly established the largest cement sheet factory in the world. DuraRoof is manufactured in two state of art manufacturing plants of 500 TPD capacity each, equipped with imported machineries to use the Italian Technology. The following standards are strictly maintained

- Computer-Aided Manufacturing (CAM): DuraRoof utilizes advanced CAM techniques for precise and efficient production.
- Superior Raw Materials: High-grade cement and imported fibers ensure the strength, durability, and longevity of DuraRoof sheets.
- Expert Monitoring: A team of highly qualified professionals oversees the entire production process, guaranteeing consistent quality.
- Hatschek Machine: Flat sheets are meticulously formed using the Hatschek Machine.
- Strict Quality Standards: DuraRoof adheres to strongest BSTI standards and meets international benchmarks like ISO 393-1:1983(E), IS 459:1992, and IS 5913:2003.

HOW CEMENT SHEET IS THE PREMIER SOLUTION  
FOR SUSTAINABLE CONSTRUCTION

**INDUSTRY CERTIFICATIONS AND STANDARDS:**  
Cement sheets meet various international certifications and standards, ensuring they adhere to global quality and safety benchmarks. These certifications include ISO standards for building materials, fire safety ratings, and environmental impact assessments.

**ENVIRONMENTAL AND SUSTAINABILITY BENEFITS:**  
Cement sheets contribute to sustainability by offering energy efficiency, recyclability, and low environmental impact. They are part of global initiatives and certifications related to green building materials, such as LEED (Leadership in Energy and Environmental Design) and BREEAM (Building Research Establishment Environmental Assessment Method).

**A SUSTAINABLE SOLUTION FOR BUILDING CONSTRUCTION**  
Cement sheets are not only versatile and durable but also contribute significantly to sustainable building practices. By using cement sheets, companies can accelerate their path to obtaining LEED (Leadership in Energy and Environmental Design) certification, a globally recognized symbol of sustainability achievement.

HOW CEMENT SHEETS CONTRIBUTE  
TO LEED CERTIFICATION

“By incorporating cement sheets into building designs, companies can achieve several LEED certification criteria more efficiently. Their benefits in energy efficiency, sustainable materials, indoor environmental quality, durability, and contribution to sustainable site development make them an excellent choice for green building projects.”

# CEMENT SHEETS - A GLOBAL SOLUTION

Cement sheets are a versatile and durable building material used worldwide in various construction projects. Known for their strength, fire resistance, and adaptability, cement sheets have become a preferred choice for both exterior and interior applications in residential, commercial, industrial, and agricultural settings.

## GLOBAL USE CASES OF CEMENT SHEETS

### Building Exteriors

United States: Cement sheets are widely used in the United States for commercial building facades. They offer excellent weather resistance, aesthetic appeal, and durability. For instance, many commercial buildings in cities like New York and Chicago use cement sheets for their exteriors to withstand harsh weather conditions while maintaining a modern look.

### Internal Applications

Europe: In Europe, cement sheets are commonly used for false ceilings in office buildings. They provide sound insulation, fire resistance, and are easy to install, making them ideal for modern office spaces. Companies in cities like Berlin and Paris prefer cement sheet false ceilings for their sleek appearance and practical benefits.

## OTHER GLOBAL USE CASES

### Agricultural Structures

India: In India, cement sheets are extensively used in agricultural structures like barns, poultry farms, and storage sheds. They offer moisture resistance, durability, and ease of installation, which are crucial for agricultural settings. Farmers in states like Punjab and Maharashtra rely on cement sheets for constructing robust and long-lasting agricultural buildings.

### Industrial Applications

China: In China, cement sheets are used in factories for partition walls and roofing. Their fire resistance, strength, and cost-effectiveness make them a preferred choice for industrial applications. Factories in industrial hubs like Shenzhen and Shanghai often incorporate cement sheets into their designs.

### Educational Institutions

Africa: Cement sheets are used in schools and universities across Africa for building durable, low-maintenance structures. They are valued for their longevity, safety, and affordability. Educational institutions in countries like Kenya and Nigeria utilize cement sheets to create safe and sustainable learning environments.

### Commercial Retail Spaces

Middle East: In the Middle East, cement sheets are utilized in shopping malls and retail outlets for both aesthetic and functional purposes. Their design flexibility, durability, and resistance to environmental factors make them ideal for commercial spaces. Retail complexes in cities like Dubai and Riyadh showcase the effective use of cement sheets.

## CEMENT SHEETS - A TRULY GLOBAL PRODUCT

### GLOBAL PRESENCE:

Cement sheets have a significant presence in key markets worldwide, including North America, South America, Europe, Asia, Africa, and the Middle East. They are used in diverse applications, from residential homes and commercial buildings to industrial facilities and agricultural structures.

## CEMENT SHEETS ARE WIDELY USED ACROSS THE GLOBE IN VARIOUS CONSTRUCTION.

**CEMENT SHEETS** ARE USED IN MORE THAN  
**50** COUNTRIES WORLDWIDE

# CONTRIBUTION OF CEMENT SHEETS TO THE SUSTAINABLE DEVELOPMENT GOALS (SDGS)

Cement sheets, as a versatile and durable building material, contribute significantly to the United Nations Sustainable Development Goals (SDGs). By addressing various aspects of sustainability, cement sheets play a crucial role in promoting responsible consumption, improving living conditions, and fostering sustainable communities.

## SDG 3: GOOD HEALTH AND WELL-BEING

### CONTRIBUTION:

- Improved Indoor Air Quality: Cement sheets help reduce the presence of volatile organic compounds (VOCs) and other pollutants, contributing to healthier indoor environments. This aligns with the goal of ensuring healthy lives and promoting well-being for all at all ages.
- Fire Resistance: The fire-resistant properties of cement sheets improve the safety of buildings, reducing the risk of fire-related injuries and fatalities.

## SDG 6: CLEAN WATER AND SANITATION

### CONTRIBUTION:

- Durability and Leak Prevention: The durability of cement sheets prevents leaks and water damage, ensuring clean and safe roofing solutions.

## SDG 9: INDUSTRY, INNOVATION, AND INFRASTRUCTURE

### CONTRIBUTION:

- Sustainable Building Materials: Cement sheets contribute to the development of resilient infrastructure and sustainable industrialization by providing a durable and eco-friendly building material.
- Innovation in Construction: The use of cement sheets in modern construction techniques supports innovation and the development of sustainable buildings.

## SDG 11: SUSTAINABLE CITIES AND COMMUNITIES

### CONTRIBUTION:

- Disaster Resilience: Their resilience to natural disasters, such as earthquakes and hurricanes, helps create safer and more sustainable communities.

## SDG 12: Responsible Consumption and Production

### CONTRIBUTION:

- Recyclability and Waste Reduction: Cement sheets are often made from recycled materials contributing to waste reduction and sustainable consumption.
- Sustainable Manufacturing Practices: The production of cement sheets involves sustainable practices that reduce environmental impact and promote resource efficiency.

## SDG 13: Climate Action

### CONTRIBUTION:

- Energy Efficiency: Cement sheets improve the energy efficiency of buildings by enhancing thermal insulation, reducing the need for heating and cooling, and lowering greenhouse gas emissions.
- Low Carbon Footprint: The production and use of cement sheets contribute to reducing the carbon footprint of buildings, supporting climate action initiatives.

“ Cement sheets are a valuable building material that supports multiple Sustainable Development Goals. By promoting good health, fostering innovation, building resilient structures, encouraging responsible consumption, and supporting climate action, cement sheets contribute to a sustainable and inclusive future. Their versatile applications in various construction projects globally demonstrate their importance in achieving the SDGs and promoting sustainable development. ”

TECHNICAL  
DATA SHEET (TDS)

| Technical data                  | In mm      | In inches    |
|---------------------------------|------------|--------------|
| Thickness (nominal)             | 6 mm       | 1/4"         |
| Overall width                   | 1086 mm    | 42.75"       |
| Net covering width              | 1016 mm    | 40"          |
| Density (nominal)               | 1720 kg/m3 | 45.87 kg/ft3 |
| Pitch of corrugations (nominal) | 146.5 mm   | 5.75"        |
| Depth of profile                | 47.6 mm    | 1.875"       |

## DURAROOF BOOSTS LIVESTOCK WELFARE

### DAIRY

- In summer, the temperature inside the shed reduces up to 12°C, and that helps heat stress-related diseases in cattle. As a result, medication costs are reduced up to 25%.
- In dairy sheds, milk and meat production increases up to 35%, and expenses decrease up to 40%.
- Controlling the temperature in winter keeps a comfortable temperature inside the shed.
- No harmful gases are produced in the shed, allowing the cattle to stay comfortable and maintain normal food intake and digestion.
- The natural temperature in the shed prevents reproductive hormone loss and fetus loss.

### POULTRY

- Egg and meat production increases up to 35%, and expenses decrease up to 30%, in the shed made by DuraRoof.
- Controlling the temperature keeps the shed cool in summer, reducing medication costs up to 25%.
- Maintaining the temperature inside the shed during the winter keeps it warm.
- It prevents the noise of rain, ensuring egg production and chicken health, maintain comfortable environment inside the shed.

## “ NO ADDITIONAL MAINTENANCE COST ”

Machines in my factory got quickly rusted due to the humidity and break down, as a result, when it rained, water used to drip into the factory. Working in the factory felt like an oven during the summers due to excessive heat.

DuraRoof sheds my paper factory which has drastically changed the work environment of my factory. Now my factory is rust and corrosion free.

Dripping water does not hinder productivity, keeps a favorable humidity level in the recycling plant and keeps the factory environment dry. There are no additional maintenance costs of the shed and the factory remains weather proof round the year.

**MOHAMMAD YUNUS**  
Managing Director, Yunus Group of Industries

## “ DURAROOF INCREASED OVERALL PRODUCTIVITY IN MY FACTORY ”

Working under humid conditions has taken a toll over my factory and my employees. The chemicals from the dye used to get over-heated.

After installing DuraRoof the work enviornment has evidently changed. Now my factory shed is rust and corrosion free.

DuraRoof reduced the overall temperature inside my factory, giving my employees relief from heat and increased the productivity of workers to a great extent which increased overall productivity of the factory.

**MD. KAMAL UDDIN**  
Chairman, Torque Fashions Limited

## “ DURAROOF CHANGED MY FACTORY WORKING ENVIRONMENT ”

My washing plant's roof used to face multiple damages due to chemical corrosion. Now DuraRoof is installed at my washing plant.

DuraRoof has completely changed the working environment in my dyeing factory. Being rust-free and with strength to withstand chemical corrosions, DuraRoof has provided my factory with permanent solutions.

The shed has improved worker's productivity and comfort. It can withstand upto 1100° celsius of heat.

**ABDUR RAHIM MAJUMDAR**  
Chairman, Raj Washing Plant

## “ DURAROOF HAS BROUGHT REVOLUTION TO INDUSTRIAL ROOFING ”

The Pakiza Appareals Ltd. factory is currently using DuraRoof. Compared to profile sheets, DuraRoof has many advantages and it is very durable.

DuraRoof adapts to the weather and keep our workers in a comfortable environment which improves productivity. During the winter, the temperature stays stable and during the summer, the temperature reduced by DuraRoof.

It is nonflammable and nonhazardous. Also, completely rust free and long lasting. DuraRoof brought in a revolution to the industrial roofing.

**RAKIBUL ISLAM KHAN**  
Managing Director, Pakiza Knit Composite Ltd.

## DURAROOF IS BEING EXPORTED TO INDIA AND PAKISTAN

Anwar Group has achieved a significant milestone by exporting DuraRoof to India and Pakistan. Despite the longstanding preference for local cement sheets in India, DuraRoof has gained prominence due to its exceptional global standards. Widely adopted in diverse Indian industrial facilities, DuraRoof's popularity is on the rise. Its acceptance extends to Pakistan, marking a substantial success for Anwar Group. The company's initiatives go beyond commercial success, aligning with a commitment to product excellence and contributing meaningfully to the economic development of the nations it serves.

## WORLD CLASS QUALITY CONTROL LAB ENSURES HIGHEST QUALITY

# CORPORATE SOCIAL RESPONSIBILITY

Anwar Group of Industries (AGI), a 190 years old family owned conglomerate, has been practicing public philanthropy even before its inception in 1834. AGI not only pioneered in development of a corporate and entrepreneurial culture in Bangladesh but also broadened the idea of Corporate Social Responsibility in the Country.

## MENTIONABLE PROJECTS

### GO GREEN

AGI responsibly acknowledges the unfortunate effects of global warming and environmental pollution that come with development and industrialization. With this cognizance, Anwar Group has prioritized environmental sustainability and deployed only the greenest technologies in its factories. Anwar Group proudly claims ZERO PHYSICAL WASTAGE for its manufacturing process with continuous recycling.

### AZAD MUSLIM WELFARE COMPLEX

This welfare complex has taken the pledge to help less privileged and distressed people of the Lalbagh

### INSTANT HELP FOR LESS PRIVILEGED PEOPLE OF AMLIGOLA, LALBAGH

Every month Anwar Group of Industries gives support to the less privileged people of Amligola regarding many purposes, such as education, treatment, food, marriage etc.

### ORPHANAGE

**Riadul Muslimat:** Our honorable founder Chairman Mr. Anwar Hossain was involved in this organization. There are about 350 students who are receiving free education from here. Among them 50 orphan girls are receiving full support for living and education.

### EDUCATION

#### **Jamila Khatun Lalbagh Girls High School:**

Jamila Khatun Lalbagh Girls High School was established in 1959 by the initiative of Alhaj Anwar Hossain. There are almost 530 students in this school.

### HEALTH SERVICES

- Jamila Khatun Red Crescent Maternity and Child welfare center
- Child and Newborn Service
- Rahim Baksh Eye Hospital
- Alhaj Anwar Hossain Diabetic Hospital

### ALHAJ ANWAR HOSSAIN FOUNDATION

Alhaj Anwar Hossain established this foundation in 2003 with a noble view to improve the condition of underprivileged people by collecting Zakat from Anwar Group of Industries, donations/subscriptions from permanent and general members, and other sources. Education, old parents, and health are the key segments of this foundation. Working locations are Amligola, Lalbagh, and other regions of Bangladesh and priority persons are poor relatives, and employees (self, children & old parents). The foundation also conducts all CSR activities of AGI.
